## AREAS OF SERVICE IN YOUR COMMUNITY

Lafrentz can provide you with durable road markings for:

- + Line Markings
- + Crosswalks
- + School Zones
- + Bike Lanes
- + Special Symbols

For over 35 years, Lafrentz has been Western Canada's source for road marking materials, application, and consultation.

Lafrentz provides a variety of road marking materials and / or application services ranging from traditional paint to more durable solutions including surface-applied markings, inlaid markings, and skid-resistant materials. Our team of consultants holds both technical knowledge and practical experience. We cater our services to your needs, whether it means having us apply the product, or training your crews to do it themselves.

## SAFETY IS OUR PRIORITY

Safety is paramount to the well-being of your community, so we design our products to enhance safety in a number of ways. Our products provide year-round delineation, meaning our markings are visible in any type of weather. Area markings (i.e.: bikeway markings) can be made to include safety features such as bright colours and retro-reflectivity for enhanced visibility, safety and awareness. Skid-resistant surfaces can be applied in areas where safety is a special concern.

Keeping roads safe has obvious benefits for municipalities, but it also makes financial sense. Our clients report seeing the largest return on investment (due to reduced incidents) when they invest in effective road marking application on a regular basis.

# ROAD MARKINGS FOR MUNICIPALITIES

## ENHANCED VISIBILITY, SAFETY AND PERFORMANCE

### LAFRENTZ ROAD MARKINGS

#### SURFACE-APPLIED MARKINGS

Surface Road Markings use surface applied plastic to create smooth, durable markings that last longer than paint.

- Medium durability
- Ideal for medium ADT roadways, edge lines and highway message markings
- Can be applied using Lafrentz System 400 Cold Plastic or System 300 Thermoplastic (see below), depending on the time of year / type of project
- **More information:** [www.lafrentz.ca/surface-road-markings](http://www.lafrentz.ca/surface-road-markings)

#### INLAID MARKINGS

Using our System 300 Thermoplastic (see below), inlaid markings are applied within a groove milled into the asphalt and can be made flush with the surface or 2-3 mm above the road surface.

- Most durable type of road marking, often lasting the entire lifetime of the surface (expected service life of 7-10 years)
- 5mm-10mm inlaid + 2mm-3mm on surface
- Ideal for high wear, high ADT, arterials, high-speed
- **More information:** [www.lafrentz.ca/inlaid-road-markings](http://www.lafrentz.ca/inlaid-road-markings).

#### PAINT MARKINGS

This traditional method of road marking is a fast, low-cost option.

- Expected service interval of 4-12 months
- Ideal for local roads, highways, parking lots
- **More information:** [www.lafrentz.ca/painted-road-markings](http://www.lafrentz.ca/painted-road-markings)

#### SKID-RESISTANT AREA MARKINGS

Our skid resistant materials, which can be used on their own or combined with other markings, optimize the safety of any road surface.

- Methyl methacrylate binder with refracted calcinated bauxite aggregate
- Ideal for intersection approaches, pedestrian crossings, anti skid lanes, jogging paths, running tracks
- Can be precisely colour-matched using Pantone values
- Area can be opened to traffic shortly after application
- **More information:** [www.lafrentz.ca/skid-resistant-surfaces](http://www.lafrentz.ca/skid-resistant-surfaces)

“Lafrentz is dedicated to the safety of your community.”

### Road Markings Comparison

Paint	Surface Markings (Extruded Plastic)	Inlaid Markings
0.2mm-0.3mm	2mm-3mm	2mm-3mm on surface 5mm-10mm Inlaid

### OUR DURABLE ROAD MARKING PRODUCTS

#### SYSTEM 400 COLD PLASTIC

- Chemically bonded, which conserves energy
- Can be applied in temperatures as low as 0°C, which extends construction season
- Ideal for medium ADT, high-speed, highway message markings
- **More information:** [www.lafrentz.ca/product-specifications](http://www.lafrentz.ca/product-specifications)

#### SYSTEM 300 THERMOPLASTIC

- Heat bonded
- Ideal for medium ADT, high-speed, highway message markings
- Lafrentz is an industry leader in thermoplastic application, with over 35 years of experience
- **More information:** [www.lafrentz.ca/product-specifications](http://www.lafrentz.ca/product-specifications)
