Lafrentz designs and installs industrial and enhanced safety markings, as well as special skid-resistant surfaces across Western Canada.

Safety markings are usually designed for high visibility and serve as a visual cue to drivers and pedestrians to proceed with caution. Lafrentz installs safety markings using our System 400 Cold Plastic as a base. We can create any colour imaginable, and can even match Pantone Management System (PMS) colour values for a completely custom look. As Lafrentz safety markings are made of plastic, they are very durable, highly visible, and last longer than painted surfaces.

For additional skid resistance in wet and dry conditions, Lafrentz offers engineered safety surfaces, which can be applied on their own or as an enhancement to safety markings. For skid-resistant surfaces, our Colgrip product provides excellent skid resistance in a variety of colours. Colgrip is very durable and cures quickly, meaning the treated area can be opened to vehicle or pedestrian traffic soon after application.

ENHANCED SAFETY MARKINGS

If you've got an idea for a special road marking project, Lafrentz can help. Our team can design and install completely custom road markings that enhance safety while maintaining a nice esthetic. We've designed and installed everything from multi-coloured crosswalks to dual-coloured lines in custom colours to parade squares. If you can dream it, we can make it!

INDUSTRIAL SAFETY MARKINGS

Safety can be improved in warehouses and indoor / outdoor industrial settings with the application of custom markings. Lafrentz can create any number of colours to enhance visibility, including low light / dark environments. Reflective emergency exit paths and skid-resistant areas are common applications with Lafrentz's custom-designed safety markings.

SAFETY MARKINGS & SURFACES

KEEPING DRIVERS, PEDESTRIANS AND WORKERS SAFE

SAFETY MARKINGS AND SURFACES ARE OFTEN USED TO ENHANCE SAFETY AND WAYFINDING IN THE FOLLOWING AREAS:

- + Bus lanes
- + Bicycle lanes
- + Speed zones
- + Intersection approaches
- + Footpaths
- + Pedestrian crossings
- + Jogging/running tracks
- + Industrial sites/warehouses

SKID-RESISTANT SURFACES

Where safety is a special concern, Lafrentz designs and applies special skid-resistant surfaces. Colgrip high friction surfacing uses a self levelling methyl methacrylate binder and a special aggregate called refracted calcinated bauxite. Colgrip is an economic choice, does not wear through polishing, and outperforms other road surfaces with an effective service life of six to eight years. Colgrip can be applied in custom shapes, and can be precisely colour matched. Skid-resistant surfaces are a good choice for approaches, pedestrian crossings, anti-skid lanes, jogging paths / running tracks and other areas where extra grip is important.

YOUR PROJECT, YOUR WAY

Bring Lafrentz to the table for your next safety markings and surface project. With 20 years of experience designing, manufacturing and applying safety road markings and surfaces, we can suggest the best and most cost-efficient ways to enhance safety for your particular project, while bringing your ideas to life.

“ Want to create your own project?
Purchase these materials from Lafrentz
and apply them yourself. Order online at:
